Okay, Ernie. You have SP3 for Office 2000, and also SP8 for JET 4. That part is fine, so it must be another factor.

The knowledgebase also contains this article:

ACC2000: Memo Field Truncated When Report Is Output to Excel at:

<http://support.microsoft.com/default.aspx?scid=kb:en-us:208801> explaining that the file format you export to might be the issue.

You might also like to open your table in design view, and check there is nothing in the Format property of the field. Anything there can cause truncation at 255 characters.

Similarly, if you are exporting a query, the query will truncate the memo fields if it has to perform any aggregation on the memo field. That includes a DISTINCT predicate, or naming the memo field in the GROUP BY clause. (You can use First under the memo in a Totals query without truncating it.)
