Where is this code? What is causing it to run. I assumed from your use of

DoCmd.DoMenuItem acFormBar, acRecordsMenu, acSaveRecord

that it is in a form module. If it's not, then you need to reference the
form that you do want to save:

```
With Forms("HopeThisFormIsOpenOnTheDesktop")
  If .Dirty Then .Dirty = False
End With
```

If it's not running behind a form, how do you know which record is going
to be saved by running the code above? Seems a bit of a crossed-your-
fingers job to me!

All the best

Tim F
