Thank you, Allen :-). I'm not sure how to incorporate it into the audit trail code I got from you, though. That is, I already have the code for the other (current user, machine name, etc.) but when I try to add it to the audit trail code, I get error messages saying something like "the input query must have a query or table" (or something like that. So I know I'm doing something wrong, and think it must be something really simple, but I'm not getting it. I'm very new at this and not sure how to add to the existing audit trail code to make it all work right.
