Matt,

I think the best solution for you is to find someone local who can look over your shoulder and give you a hand. I really believe this one is too complex to work out via these posts. If I had your database in front of me, I could certainly solve this problem, but please understand I am like a blind NASCAR driver trying to make it around the track with instructions through a radio.

Your information has been complete and clear, it is just the complexity of the situations.

Maybe at this point, your VBA is limited, but none of us were born knowing it. This may be a good opportunity for you to enjoy a learning experience.

Best of Luck to you.
