Yeah, the OP was Fabbe (Refresh a BusinessObjects report – 5/18/2005). I grabbed the snippet of code (s)he had posted and found a bit more on the web. I've referenced the BO object library and found a lot of stuff through the Object Browser but am unfamiliar with the syntax. I find the BO tech support site near worthless but found a user forum that looks promising.

Kinda funny, one response I got on the forum is very similar to some of the posts I see here. Someone is always trying to redesign your app instead of helping out with the code you need. :-)

Regards,
RD
