Hi Ofer.

It didnt' work. If anything, it bumped me into debug mode and crashed Access (I'm using Access 2003).

After regaining conciousness ... I tried manually filtering the project ID of 6000. In the properties box for the form, the Filter property shows:

(([qry Reports].PROJ_ID=6000))

So I'm not sure whether to include the (()) or what to do. Any other suggestions?

Dirk
