I use this vba code after to connect Access to a remote db. I obtain a recorset and I want to show it as "table". I bind this recordset to a form, but how to show as table?

This is the code (associated to a clik of a command botton):

```
Set recSet = New ADODB.Recordset
```

```
With recSet
```

```
Set .ActiveConnection = con 'con is the connection  
defined above in the code
```

```
.Source = "select var1 from datamart where rix=4"
```

```
.LockType = adLockBatchOptimistic
```

```
.CursorType = adOpenKeyset
```

```
.CursorLocation = adUseClient
```

```
.Open
```

```
End With
```

```
Set Me.Recordset = recSet
```

After this code I correctly bind the recordset to the form , and if I set the Form to "spreadsheet", I obtain a table with the just number of records but without fields.....

Someone could hel me?

thanks
