Hi Zanstemic,

I'm interested in hearing about your scenario. Can you describe in a little more detail what you hope to accomplish? Can you describe your application a little bit? Size, complexity, business need, etc?

In what way would you like Access to help you here? How do you envision your users using this application? How many users?

Thanks,

—

I currently have a functioning system that is split between a FE and BE.
I'd
like to make the FE web based.

What is an efficient method for generating the web forms that link an ODBC
connected database?

Any guidance is appreciated
