Using Office 2003 and Windows XP;

Suppose I have color code: #C5C2B9

How can I convert the above code to a value that can be used in MS-Access for the background color of a control?

You can do it manually in the Immediate window:

```
?CLng(&HC5C2B9)
```

If you have a text field or a string variable with the Hex number, then use:

```
lngColor = CLng("&H" & strHex)
```
