Nevermind, I found the correct syntax. Here it is incase other people have the same problem

```
Public Sub AddValues()  
Dim strString As String  
strString = "INSERT INTO import(Agency, Regular, AWG, Rehab, FFEL, FDSL  
Direct) SELECT "  
strString = strString & Agency & " as Agency, " & Regular & " as Regular,"  
& AWG & " as AWG," & Rehab  
strString = strString & " as Rehab," & FFEL & " as FFEL," & FDSL & " as  
FDSL," & Direct & " as Direct"  
DoCmd.RunSQL strString  
End Sub
```

Coming from MySQL to Access, I realize there are some syntax differences. The following code works in MySQL, but doesn't work in Access. What's the correct syntax for the SQL string?

```
Public Sub AddValues()  
Dim strString As String  
strString = "Insert into [import] set [Agency]=" & Agency & ",  
[Regular]=" & Regular & ", [AWG]=" & AWG  
strString = strString & ", [Rehab]=" & Rehab & ", [FFEL]=" & FFEL & ",  
[FDSL]=" & FDSL & ", [Direct]=" & Direct
```

RE: Insert Statement Syntax

```
DoCmd.RunSQL strString  
End Sub
```
