I think you have your tables wrong. The Enroll table should not have the same values/fields as Courses. Access is a relational database so use it as one. Your Enroll table doesn't have the students' FirstName, LastName etc so why would it have ClassName, CourseNumber, and CourseDescription.

If you are just starting out with this, check these links:

<http://www.mvps.org/access/tencommandments.htm>

<http://www.granite.ab.ca/access/tablefieldnaming.htm>
