Sorry. Guess some of that info would help. I can get the query to run directly but comes up empty when I run it from the command button on the form. The query SQL is:

```
SELECT [full database].ID, [full database].School, [full database].street,
[full database].city, [full database].state, [full database].zip, [full
database].County, [full database].Region, [full database].Phone, [full
database].lower, [full database].upper, [full database].Full_District, [full
database].Short_District, [full database].Name, [full database].Position,
[full database].Email
FROM [full database]
WHERE ((([full database].School)=[forms]![Form1]![List0]));
```

The list box displays the field School. The form is Form1 and the listbox is List0. Thanks
