-

I have a table that consist of rows of one field.

like this

- 1) firstitem
- 2) thisitem
- 3) thatitem

I want to compare the values in the table against another value, and if the any value in the table is included as part of the other value of that other value i am comparing it against its selected.

For example

If i compare firstitme against lalalfirstitemlalala then the first row is added to the selected list and so on.

What is the statemnt I should use with the LIKE clause

Best regards.

.
