I had a report that grouped contract data by Dept – at the beginning of each group, I had a textbox which contained the count of that group – the number of items. My boss decided that they don't want the contracts grouped, but still want the group totals to show in the report header.

So it would look like:

CONTRACT DATA REPORT

Marketing Dept: 35 Contracts total | Sales Dept 47 Contracts total | Maintenance Dept: 33 contracts total

Detail record 1
Detail record 2
Detail record 3
Detail record 4
(Listing all records – no grouping)
