I am having a problem sorting records in a query. I have about 5,000 entries in a table and when I build my query based on certain fields, the numbers in certain columns are not in order although I use the sorting feature. (e.g.) I have 5 columns with numbering data contained in the columns, and I have it set up to sort in ascending order, which it did, but I noticed that the Volume # column sorts the Volume numbers differently (see example below):

V. 1
V. 10
V. 11
V. 12
then it goes back to
V. 2
V. 3
V. 4
V. 5
V. 6
V. 7
V. 8
V. 9

It looks like it sorts anything with a 1 first then the rest later.
How do I fix this?

Thanks.
