Thanks very much for that prompt. I think that will work great. However, I did a copy and paste of:

```
WHERE Instr(", " & [Enter first names] & ",", ", " & [FirstNameField] & ",") > 0
```

....and edited for my specifics, but get a syntax error.

I also tried: WHERE Instr(", " & [Enter first names] & ",", ", " & [FirstNameField] & ",")

....just in case that second line did not apply.

Also....The multi-selection suggestion would be neater, but there so MANY different names that sorting through the choices would take more time than just typing them in.

THANKS
