```
UPDATE table1
SET table1.Rec_FW = ( SELECT table2.Fiscal_Week
```

I don't want the Rec_Date field to be updated. I want the Query to use the Rec_Date field and compare to the other table and then put the fiscal week into a field called Rec_FW. I thought the "SET" line in my first query would have done that, but it's not actually changing the value to the fiscal week.

Dear JB:

Sorry, no, it doesn't make sense to me right now. How can you update a date/time column (Rec_Date) to be a week?

Tom,

This is pulling the right record, but I need the query to actually update Rec_Date to the fiscal week.
Does that make sense?

"Tom Ellison" wrote:

Dear JB:

Let's make it simpler. Test just a SELECT query:

```
SELECT table1.Rec_FW, table2.Fiscal_Week
FROM table1, table2
WHERE table1.Rec_Date BETWEEN table2.Saturday AND
```

Re: Lookup in Query

```
table2.Friday
AND EXISTS
(SELECT table2.Fiscal_Week
FROM table2
WHERE table1.Rec_Date BETWEEN table2.Saturday AND
table2.Friday)
```

Next, does this do anything different:

```
SELECT table1.Rec_FW, table2.Fiscal_Week
FROM table1, table2
WHERE table1.Rec_Date BETWEEN table2.Saturday AND
table2.Friday
```

If the specific row does not exist, I don't think the latter query would return that anyway.

I hope this looks like progress. Please let me know what you find.

Sorry to be so vague.
Here is my SQL Statement

```
UPDATE table1
SET table1.Rec_FW = ( SELECT
table2.Fiscal_Week
FROM table2
WHERE table1.Rec_Date BETWEEN
table2.Saturday AND table2.Friday)
WHERE EXISTS
( SELECT table2.Fiscal_Week
FROM table2
WHERE table1.Rec_Date BETWEEN
table2.Saturday AND table2.Friday);
```

This is returning the right amount of Records when I run it, but it is not actually updating that field. They are just left blank.
