Hi all out there..

Am I on the right track? I have set up a query to search my records. I want to search by 6 fields which are inputted from a Form. I am using

Like [Forms]![frmMembers]![combobox] & "*" or Is Null

as the criteria where combobox are the parameters entered on the form. Im getting all of my records returned with any search, is this because when a combobox is empty, it adds every record?

What I want, is:

- 1 The query uses the comboboxes for the search parameters
- 2 If all comboboxes are empty, all records are returned.
- 3 If a combobox is filled in, but another is empty, the search only uses the filled in combobox.

Any suggestions?

Thanks all...
