- 

I'm using Access 2000 and I have a field which contains sample data as follows: 4, 101 a-d, 54-56 6(a,b,c), 99, 104, 249a&249b and data type assigned to this field is text. Since this field combines text and numbers, is there anyway to sort this data in ascending order, also as its text field 4 comes after 39, I found that I should replace it with 04 , is there any other method to sort this data numerically in perfect ascending order.
