No, in the report's close event is where you would close the form. What event are you currently using to close the form? Instead of closing the form in that event, set the form's visible property to false.

Do you have a button on the form to close the form? If so, change the code in the button so it doesn't close the form, but sets the form's visible property to false.

Forms!YourFormName.Visible = False

Where do I set the form's visible property to No – Is it in the Report's close event ?

"John Spencer" wrote:

You can't close the form until you close the report. You can set the form's visible property to No. And in the close event of the report, close the form.

The query the report is based on uses the values of the controls on the form. When you close the form, the controls are no longer available.

Does anybody have a permanent fix for the 'enter parameter value" dialog box that pops up after closing my query dialog form. I have gone back and looked at my query, the record source

Re: 'Enter Parameter Value'

of my combo  
box.

I even used some code that will set the recordsource value of  
the combo

box

to null, just before the DCmd.Close command. I just can't get

this

thing

to

stop.

I also tried the suggestions on microsoft's website. Been

working on

this

for a week, and it's starting to become a pain to solve.

Scenario – Select a report from my reports menu, Custom  
Query Dialog

form

appears: { combo box, two command buttons( Open/Close)

Problem happens when I click on the close button.

Record source of combo box. – SELECT  
tblSopNumbers.ControlNumber FROM  
tblSopNumbers;

SQL Code for query that report is based on –

```
SELECT tblTraining.EmployeeID,  
tblSopNumbers.ControlNumber,  
tblTraining.Training_Validation, tblTraining.TrainingDate  
FROM tblTraining INNER JOIN tblSopNumbers ON  
tblTraining.ControlNumber  
=  
tblSopNumbers.ControlNumber  
WHERE  
(((tblSopNumbers.ControlNumber)=[Forms]![frmTraining  
Summary By  
SOP]![cboSop]) AND  
((tblTraining.Training_Validation)='Yes'));
```
