Add a column to the query.

Field: LessThan4: Len(Fund) > 4

Criteria: Forms!frmSelectDateType!TxtType="Type1"

What this does is

—Calculates the Len of Fund being greater than 4 and returns True (or False)

—Criteria returns True if "Type 1" is selected on the form or false otherwise

So

if the Len(Fund) > 4 and type is "Type 1" (True = True evaluates to True) only Fund with len > 4 are returned

if the Len(Fund) <= 4 and type is Not "Type 1" (False= False evaluates to True) only Fund with len <= 4 are returned

Hi,

I have created a form to pass parameters to a query. The first parameter is

the date range: Between [Forms]![frmSelectDateType]![BeginningDate] And [Forms]![frmSelectDateType]![EndDate]. The next parameter I have on the form

is a combo box with two values, Type 1 and Type 2. If the user selects "Type

1", I need the query to run Len([Fund])>4 as the criteria for the Fund field.

If the user selects "Type 2", I need the query to run Len([Fund])<=4.

How can this expression be written?
