Hi all,

I have a database designed to track subscribers to our paper, print lists of subscribers for the carriers, print a pay request for our accountant, track payments from our subscribers and I'm sure several other things I have yet to realize. I'll try to briefly describe them so that you can visualize the tables and relationships.

tbl_Fees: defines the type and price of our subscriptions; yearly, in town, \$48; yearly, mailed, \$75; 6 month mailed...

tbl_Payment: tracks payments made by our subscribers; date, amount, year made...

tbl_Carrier: carriers contracted to deliver residential and commercial delivery; first and last name.

tbl_Area: areas of town we deliver along with how many homes and subscribers are in this area; Las Alturas, 983, 16, commercial_1, 0, 189, Mail...

tbl_Complaint: complaints received from subscribers tracked by subscriberID

tbl_Yes/No: a table which tracks all check boxes for a subscriber; mailed, complimentary, commercial...

tbl_State: a lookup table for state abbreviations, it also enforces integrity

tbl_SubscriberData: the monster; all subscriber data and notes so I know whom I'm dealing with and their particulars.

The good news, with some test data (Old subscribers data) in the db, all relationships work, are one to many and allow referential integrity. My problem so far is queries. I seem to not know anything about making them work. I've been reading "Using Access 2000" and have ordered "Access 2000 developers handbook" but at the

Query or User errors

moment, I'm stuck with F1 and a prayer as UA2K isn't helping and A2KDH hasn't arrived.

The few I've tried return no entries and no error code so I'm sure I've goofed somewhere.

Mainly, I'm trying to print my lists for the carriers and I'd like to have several items on each report. 1) List of subscribers, 2) Do not delivers, 3) Last week's complaints. These should be sorted so by area as well so that as they are driving down a street, if they happen to look at the list, it makes sense. Also if it is possible to order them by preferred route, I'd like to know how to do it. In addition, all Do not delivers should be printed red along with complaints and any address that has been on the list less than two weeks should be highlighted yellow.

Thanks for ANY help you can provide and I'd be just as happy to look at other resources if any are available. TIA,

Byron
