I need to store binary files in an Access database. Please, just skip the discussion about creating links, and storing the images on a server; I need to see what the SQL query would look like to store a binary in the database.

You can't do it using a query, you need to use VB – this KB article 'Reading, Storing, & Writing Binary Large Objects (BLOBs)' explains how: <<http://support.microsoft.com/kb/103257>>
