EEK!

Try this, then post your findings

Press Alt+F11 to open the VBA editor
Press Ctrl+G to navigate to the Immediate window
Type the following:
? currentdb.QueryDefs("<the name of your query>").SQL
Include quotes in the above.

Another possibility:

Navigate to the Documenter (might be Tools | Analyze | Documenter)
Click the Queries tab and select the problematic query
Click OK
The document report should reveal the SQL of the query

HTH!

I'm in Design View. When I try to go to SQL View it won't let me because of the error. Can I get around this? Sorry, I'm a newbie.

If you don't post a copy of the SQL, we can only guess...

I have a standalone query that works. When I cut and paste it into an existing query that works I start getting a parenthesis error. It says I have an extra closing parenthesis ")". I have two pairs of them. Just to test I took each one out individually and each time it tells me I'm missing a closing parenthesis. I'm guessing its a badly worded IBM error message. Any idea what is wrong?

Thanks.

Phil
