I copied your sql into my Northwind and I created a form off that query and I got the monthly column to total as desired. As far as the referencing is concerned, the recordsource is three letters, Jan, Feb, but the text box is labeled January, February, etc. In the footer I am referencing the recordsource, =Sum([Jan]) so I don't see that as a cause. The boxes in the footer still display error so there must be something goofy with the box or form. I may rebuild the form from scratch, it is not that involved and there is no code behind it. I don't want to take anymore of your time on something that clearly is wierd on my end so I thank you for your efforts and your help. If I figure out the cause later, I'll let you know.

Regards,  
Michael

Your first post stated "I have set the text box in the footer to reference the text box in the detail section". Are you really attempting to sum a text box? This would not work. You can sum a field from the record source but not a control.

```
I just created a form in Northwind based on the crosstab:
TRANSFORM Sum(Orders.Freight) AS SumOfFreight
SELECT Year([OrderDate]) AS Yr
FROM Orders
GROUP BY Year([OrderDate])
PIVOT Format([OrderDate],"mmm") In
("Jan","Feb","Mar","Apr","May","Jun","Jul","Aug","Sep","Oct","Nov","Dec");
```

I added text boxes in the form footer with control sources like:

```
=Sum([Jan])
```

This displayed the expected results.
