Use an update query to set the Yes/No field(s). Your date expression is correct but maybe you're using it in the wrong place. Anyway, create a query based on the table and make it an update query. Include a date field and the corresponding Yes/No field. For the date field's criteria, use <=Date(), and for the Yes/No field's Update To: expression, use 0. Run the query and all records with dates on or before today will be unchecked. Do something similar to check the box (use -1 instead of 0) and for the other certification date.

I have a database (Micro. 2000) I created that has all my subcontractor information in. IE: adds, names, etc but the important part is the certificates I'm required to have by law to have and they expire– I m trying to get the right expression for a query that the criteria will show me only the subcontractors that have certificates that are expired. There are 3 different certificates that have dates of expiration and so far I've tried the <=Date() expression and my thinking is that should show me the subs that have forms that have expired on or before the current date. But it doesn't work and I've looked all over the help & how to try and wrap my brain around this but simply I just don't get it.

The database is made on 1 table (I know it should have been broken down but I don't get how to do all that linking and relationship stuff). The fields are:

ID
FirstName
LastName
FirstName2
LastName2
CompanyName
MailingAddress
City
State
Zip
BusinessPhone
MobilePhone
HomePhone

Re: Date criteria help needed– i'm stuck :(

Re: Date criteria help needed– i'm stuck :(

BusinessFax

BusinessPhone2

Snow Sub? (Yes/no checkbox)

W-9 Form? (Yes/no checkbox) =Yes meaning OK/No meaning expired

W-9 Form Date Updated (Date Format)

Certificate of Insurance? (Yes/no checkbox) =Yes meaning OK/No meaning expired

Certificate of Insurance Expires (Date Format)

Workman s Comp Certificate? (Yes/no checkbox) =Yes meaning OK/No meaning expired

Workman s Comp Certificate Expires (Date Format)

Notes:

Dates Certs. Received

Email:

The ways I have to go thru it now is– manually go thru each record (on form view) and click the yes/no box according to the certificates expiration date. I would much rather to have the records automatically uncheck yes/no box if the certificate has expired and check the yes/no box if it up to date. I am not sure on how to go about that either. I could really use a lot of help on this– appreciate any I get. :D TYVVM
