Temporarily remove the line that sets warnings to False.
Then read the dialog boxes.

Does it report an error? Or does it say it's appending 0 records?

If there is a message about violating rules or not being able to append, this might help you to track down the issue:

Why can't I append some records?

at:

<http://allenbrowne.com/casu-19.html>

If it says it's appending 0 records, we need to work on why it isn't selecting the right records.

Another way to get information about the error is to use the Execute method, and read the error message:

Action queries: suppressing dialogs, while knowing results

If the append query is misunderstanding the date, there are several levels to check.

1. Open table tblSSAttendance in design view.
Verify that the SSClassDate field is of type Date/Time (not Text.)
Verify that SSClassID is a Number field, of size Long Integer.
The follow steps assume these settings.

2. Open form frmSSAttendEntry in design view.
If txtSSClassDate is unbound, set its Format property to:

Re: Append Query Date Criteria Problem.

General Date

so Access knows it is a date.

If cboSSClassID is unbound, set its Format property to:

General Number

3. Open the query in design view.

Choose Parameters on the Query menu.

Access opens the paramters dialog.

Enter 2 rows:

[Forms]![frmSSAttendEntry]![txtSSClassDate] Date

[Forms].[frmSSAttendEntry].[cboSSClassID] Long

The unbound text box should now be read as a date, and the query should now

perform a date match.

More information on getting Access to recognise dates:

Hi Allen,

Thanks very much for your help. However, I tried it all and then some and still could not append to my table. I have removed the date from my query and I am planning to add the date using something like this:

```
Private Sub btnAddDate_Click()
On Error GoTo Err_btnAddDate_Click

Do While Not EOF
If (IsNull(Me.SSClassDate) And (Me.Attendance = 0)) Then
Me.SSClassDate.SetFocus
Me.SSClassDate = Me.txtSSClassDate
DoCmd.FindNext
Loop

Else: GoTo Exit_btnAddDate_Click
End If

Exit_btnAddDate_Click:
Exit Sub

Err_btnAddDate_Click:
MsgBox Err.Description
Resume Exit_btnAddDate_Click

End Sub
```

I have to work on my VBA so I can make the code work. But it is way
