move to ADP

and keep everything in a real database

Oracle is a scam

"Luke Bailey" <[LukeBailey@xxxxxxxxxxxxxxxxxxxxxxxxxxxx](mailto:LukeBailey@xxxxxxxxxxxxxxxxxxxxxxxxxxxx)> wrote in message <news:33A9469B-E2E3-4FC7-8B77-A23633A27D6A@xxxxxxxxxxxxxxxxxxxx>

I have a general question on Access 2003. I have several applications

that

run in the following manner:

Step 1: Make Table queries runs and creates some large tables (extracting data out of ORACLE, etc.).

Step 2: several other queries run for summing totals, etc. using tables

from

step 1

Step 3: Import process deletes tables from step 1 to clean up space in the database.

The problem I seem to run into is that if someone goes into the queries

from

step 2 in design view when the tables are NOT existing in the database,

the

links and tables are not there and queries get saved with no links.

I do not remember this happening in previous versions of Access. Is there

a

## Re: Queries Links Change

setting somewhere to change this or any way to prevent it from happening?

Or

does this only happen when somehow the SETWARNINGS feature got set to

FALSE?

Even when tables are re-created from step 1, if you go into queries in

step

2, the links are missing.

Any thoughts would be GREATLY appreciated!

Thanks!
