A query in Access-Jet will be started and under the supervision of Jet, with Jet syntax parsing and evaluation. If the Jet-query involves a linked table, Jet communicates (through ODBC or otherwise) to the not-Jet-native data storage, transparently.

Vanderghast, Access MVP

Sorry, One more question:

The input for the records are done from the queries. If I do a link to the sql server, could it work that way. Can the input still be done in the query part of access and not in the adp?

"Dee" wrote:

Michel,

Thank you. You have been of great help. I will forward this information to my manager so we can decide which way to go.

If I have any more questions I will post here under a new post.

Again thank you
Dee

"Michel Walsh" wrote:

Yes, from that moment, you add data through the link of the linked

Re: upsizing to sql 2005

table,
so, in this case, into MS SQL Server.

A NOT linked table would store the data locally, though.

Hopefully only one more question. When I click on the upsizing wizzard, choose my tables, then choose validate, etc., then choose link SQL server tables to existing application. When this is complete which table do I add new records to? One one that says link or the original one?

Thank you
Dee

"Michel Walsh" wrote:

It can be done FROM Access as well as from any other ODBC source, but it will be stored INTO the MS SQL Server database.

Re: upsizing to sql 2005

If I upsize
using the
link option
in Access
2003, when
I input new
data
into
the database
where is
this done
from
Access or
SQL?

Thank you
Dee

myself
on
any
web-part
or
involving
the
web,
sorry,
but
from
an
Access
application,

Re: upsizing to sql 2005

yes.
Access
can
store
data
in
an
mdb
or
in
other
(updateable)
data
source,
which
include
MS
SQL
Server
linked
table.

database.
Our
web
site
is
currently
hosted
on
yahoo.
The
access
database
is
hugh
and
we
are
also
upsizing
for
security
reason.

So
what
I
mean
was
the
the
people
who
input
the
information
into
the
database
can
still
do
this
from
access
and
it
will
populate
to
sql
is

Re: upsizing to sql 2005

Are
you
stating
to
upsized
the
database
using
the
link
option?
Will
this
still
have
the
access
front
end,
because
we
do
not
want
to
train
the
web
content
developers
sql.
We
would
like
for
them
to
view
and
populate
the
tables
and
queries
the
same
way
they
do
now.

Re: upsizing to sql 2005

your application should continue to work (with its Jet-queries, on linked table).

You then have time to migrate manually your queries, if required, since your application and the data, in the database, are working fine.

Hoping it may help,
Vanderghast
Access
MVP
