How do the two tables relate to each other? I don't see any obvious fields in the two tables that would appear to give you this relationship?

Can you also show us the SQL statement of the append query that you're trying to use --- the one that gives you the error?

Show us the structure of both tables --- field names, data types, and which ones are primary key in each. Is there a foreign key in tblPatientV1 that is related back to the primary key in tblContactsV1?

MS Office 2003
I am not a programmer

I want to append record from tblContactsV1
to tblPatientV1.
tblContactsV1
has autonumber primary key; tblPatientV1
has a single primary key
(Chartnumber). I assume this is why record
does not append "key
violation."
If that is cause of key violation, how can I
best correct?

Thanks

Here is documentation for the two tables. Thanks
