To display all the columns is too much. It becomes very hard to read in the amount of space provided. In the previous email, I was just showing the last few columns which are the ones having problems.

The date does not have a time reference. Even if it did, it is at the end of the sort. The 'AAAA' language sort value should still appear before the 'Lithuanian' value.

I am working on getting a html version outside our firewall so you can see the data more clearly.

Thanks.

Kathy

Your sample data doesn't seem to display the columns used to sort. Does the Reference Date field contain a time element?

You can't attach files to messages in these news groups. You could create an image file or other information on another web page and provide a link. It is generally advisable to type or copy and paste records into the body of your reply.

Jeff,

Thanks for responding.

Here are a few columns from the query results Reference Date, Reference ID

Re: Incorrect sort results within query

and Language Sort The following rows are displayed...

Reference Date	Reference ID	LanguageSort
10/9/2007	21401	Lithuanian
10/9/2007	21401	AAAA
10/15/2007	21404	AAAA
10/15/2007	21404	Lithuanian

Rows 1 & 2 are out of order. Rows 3 & 4 are correct.

I copied the data into a little spreadsheet to show you. You probably need to see more than just the columns displayed above. How do I attach the file?
Thanks.

It all starts with the data...

Please provide an example of the data that you have in that "6th" field, how you'd expect it to sort, and how it is sorting...

Is there a limit of the number of sort items one can have within a query.
We are using MS Access 2002. I am using the following query but getting incorrect sort results. The 6th sort item is not sorting correctly. See query below...

```
SELECT [regulation parents].*, [pseudo countries].[Region name]
FROM [pseudo countries] RIGHT JOIN
[regulation parents] ON ([pseudo countries].CountryCode = [regulation parents].CountryCode) AND ([pseudo countries].RegionCode = [regulation parents].RegionCode)
WHERE ((([regulation parents].RegulationType)>0) AND
```

Re: Incorrect sort results within query

```
(([regulation
parents].RegID)=21401) AND (([regulation
parents].CountryCode)="It")) OR
(((regulation parents].RegID)=23426) AND
([regulation
parents].CountryCode)="It")) OR
(((regulation parents].RegID)=21404) AND
([regulation parents].CountryCode)="It"))
OR (((regulation
parents].RegID)=21406) AND (([regulation
parents].CountryCode)="It"))
ORDER BY [regulation
parents].HeadingName,
[regulation parents].RegulationType,
[pseudo countries].[Region name],
[regulation parents].SortTitle,
[regulation parents].RegID,
[regulation parents].LanguageSort,
[regulation parents].ReferenceDate DESC;
```

Thanks.

Kathy
