This is much more advanced than I am, so I am having a hard time troubleshooting. the name of "table1" is actually "MOVE_TASK_MASTER" if this makes a difference, I think it does. I am getting an error message that says: "Syntax error in FROM clause."

"Dale Fye" wrote:

Joseph,

Because of the sub-query, you will have to do this in the SQL view of the query. You should be able to just cut my SQL and paste it into the SQL view of a new query. Additionally, I left unintentionally left out the supervisor piece of the query, so try:

```
SELECT U.PM, U.User, U.Name, T.Task_Type,
Count(T.Task_ID) as RecCount
FROM Users as U
LEFT JOIN (SELECT Assigned_To, Task_ID, Task_Type
FROM Table1
WHERE [Task_Status] IN ("AVL", "ASN")
AND [Task_Type] IN ("Picking", "Replenish")) as T
ON U.User = T.Assigned_To
GROUP BY U.PM, U.User, U.Name, T.Task_Type
HAVING U.PM = [Enter Supervisor]
```

Dale: I am trying to put this in.

"Dale Fye" wrote:

Your criteria in the WHERE and HAVING clauses are what are causing your problem. You are also grouping by Task_Type, but don't list it in the fields you are selecting, which could lead to multiple lines for a particular user, and no indication of why. I've added the Task_Type into the select

Try:

```
SELECT U.PM, U.User, U.Name, T.Task_Type,  
Count(T.Task_ID) as RecCount  
FROM Users as U  
LEFT JOIN (SELECT Assigned_To, Task_ID, Task_Type  
FROM Table1
```
