I run a report for multiple customers – for each customer it's own report. In my process after the report is generated it is exported to a specific location and after it is e-mailed as an attachment. Is there possible to create on the fly a new path where to save the reports? Let's to say for customer AA the path will be C:\MyDocument\AA, for cust BB to save in C:\MyDocument\BB...my question if the folder AA or BB can be created through the process not before I run the reports?

thx
