hi. i have subreport that has these fields:

account

regionto

regionfrom

date

it's basically a report that shows accounts transferring from one region of the country to another. sometimes, however, the accounts transfers within the same region. i'd like to include this transfer data on a main report we have that is grouped by region.

i was hoping to bind the subreport above but when i try to bind the region field on my main report with regionto, i only see the transfers INTO the region on the main report. when i bind to transfer from, i only see the transfers OUT OF the region on the main report. when i bind to both, i only see the transfers WITHIN the region on the main report.

is there a way to say something to the effect of bind region with regionto OR region with regionfrom?
