

Date format wrong

I have an Access 2000 program that reads the date in d/m/yy instead of m/d/yy on one customer's pc.

The program is running Access 2000 runtime on a WinXP Prof. OS with Office 2000 Small Business installed. The appl first opens to a window that contains the MSCal activex control. The control is set to default to the current date on open (using the Now function); however, it opens to the wrong date. i.e. Today is 11/10/04. The calander opens set to 10/11/04.

Then when the reports are run, the data on the report shows the dates in d/m/yy format also but the dates are not being read correctly. i.e. I select today's date on the calander for the date range of data to report. It tells me there are no records. However, if I select the date range 1/1/04 thru today, the report displays the data but data for today shows 10/11/04 on the report.

I have checked the regional settings on the pc and everything looks ok there. Any suggestions where to look next?
