

Adding field – error "More than one field...."

On 2 or 3 occasions in the database I'm putting together, I have attempted to add a field to a report and received the error message:

"The specified field 'Name of field' could refer to more than one table listed in the FROM statement of your SQL statement".

I click "Help" but only get a totally blank Help window that usually hangs. The error message gives no clue as to how to troubleshoot the issue and on each occasion I have had to rebuild a report from scratch if I wanted to add a field from another table.

In adding the field on each attempt I have invoked the "Expression Builder" from the Control Source property in the Fields property box, selecting the table and then the field by double-clicking. On each occasion the message has been incorrect, in that it couldn't possibly refer to more than one table.

Has anyone worked through this one?

Keith
