Create a small lookup table to hold the possible currencies you cope with.
it will have 3 fields:

- CurrencyID Primary key
- CurFormat Text

The table will contain records such as:

- US Dollar \$#,###0.00; (\$#,###0.00)
- UK Pound £#,###0.00; (£#,###0.00)

Your main table will have fields:

- CurrencyID Foreign key to tblCurrency.CurrencyID
- Amount Actual amount (stored in Currency type field).

Include the lookup table in the query that is the RecordSource of your report, so you have the CurFormat field. Then in the report, set the ControlSource of your text box to:

=Format([Amount], [CurFormat])
