Hi

just copy this code to a new module
you have to run the pdfwrite function, give it two parameters, report name
and location, you have to install two drivers, have a look in the response I
got for my post, I used the code and it's great.

Option Compare Database
Option Explicit

'Read INI settings

```
Declare Function GetPrivateProfileString Lib "kernel32" Alias _  
"GetPrivateProfileStringA" (ByVal lpApplicationName As String, _  
ByVal lpKeyName As Any, ByVal lpDefault As String, _  
ByVal lpReturnedString As String, ByVal nSize As Long, _  
ByVal lpFileName As String) As Long
```

'Write settings

```
Declare Function WritePrivateProfileString Lib "kernel32" Alias _  
"WritePrivateProfileStringA" (ByVal lpApplicationName As String, _  
ByVal lpKeyName As Any, ByVal lpString As Any, _  
ByVal lpFileName As String) As Long
```

```
Declare Sub Sleep Lib "kernel32" (ByVal dwMilliseconds As Long)
```

```
Sub pdfwrite(reportname As String, destpath As String, Optional strcriteria  
As String)
```

```
' Runs an Access report to PDF995 to create a pdf file from the report.  
' Input parameters are the name of the report within the current database,  
' the path for the output file, and an optional criteria for the report
```

```
' Be sure to check that the "Generating PDF CS" setting in pdfsync.ini is  
set to 0  
' when pdf995 is idle. This codes uses that as a completion flag as it seems  
to be  
' the most reliable indication that PDF995 is done writing the pdf file.
```

RE: how to save to C:\ drive on report close?

```
' Note: The application.printer object is not valid in Access 2000  
' and earlier. In that case, set the printer in the report to pdf995  
' and comment out the references herein to the application.printer
```

```
Dim syncfile As String, maxwaittime As Long  
Dim iniFileName As String, tmpPrinter As Printer  
Dim outputfile As String, x As Long  
Dim tmpoutputfile As String, tmpAutoLaunch As String
```

```
' set the location of the PDF995.ini and the pdfsync files  
iniFileName = "c:\pdf995\res\pdf995.ini"  
syncfile = "c:\pdf995\res\pdfsync.ini"
```

```
' build the output file name from the path parameter and the report name  
If Mid(destpath, Len(destpath), 1) <> "\"
```
