Hello everyone,

I'm having a problem with Access that I need some help with. The short version is, I want to print a list of parts and part quantities that belong to a certain part group—One part group per page. I created a report that groups the parts by part classification group with a force new page after each group. The report is based on a query of that week's orders. Some of these parts have drawings (usually 2 each stored in an OLE link field) that need to be included in the report. I want to print the needed drawings on separate pages after each group of parts. I'm confused (about many things) on how to set something like this up—especially printing multiple pages after a group. I'm used to having a corresponding field for each record. There might be 10 parts in the group, but only 2 might need drawings—maybe none. I don't want to have a bunch of blank pages after each group. I'm not having any luck printing out the drawings. I posted a more detailed explanation below. Is it possible to do something like this, or would I have to do separate reports for each group? I've tried a report with a subreport in the group footer, but I haven't been able to get page breaks to work in the subreport and I'm not sure if I need to link by Part Group or Part Number. Maybe this is the wrong approach. I'm having a lot of trouble with this, and I would really appreciate some help in pointing me in the right direction.

Thanks,

Chad

Long Version:

I have a report that shows all the parts used in the previous week. It looks something like this:

Need Help With Multiple Pages After Groups

Part Group AAA

Part Number QTY

Part 1 23

Part 2 35

Part 3 48

Part 4 16

(****New Page****)

Part Group BBB

Part Number QTY

Part 5 23

Part 6 35

Part 7 48

Part 8 16

As you can see, I have the parts grouped in the report by Part Group they belong to. I have each group on a separate page with group page breaks.

I have a query that contains the part number, its part group classification, and an OLE Field that contains a link to an Excel spreadsheet which contains a drawing file. I want to link the part numbers that show up in the report query to the needed drawing in the table.

Query

Part Number-----Part Group-----Drawing

My situation is, I would like to include drawings for certain parts after each group. What I want to do is print a page for each group followed by the needed drawings—one on each page—not all parts have drawings:

Page 1

Need Help With Multiple Pages After Groups

Part Group AAA

Part Number QTY

Part 1 23

Part 2 35

Part 3 48

Part 4 16

Page 2

Part 1 Drawing #1

Page 3

Part 1 Drawing #2

Page 4

Part 3 Drawing #1

Page 5

Part 3 Drawing #2

Page 6

Part Group BBB

Part Number QTY

Part 5 23

Part 6 35

Part 7 48

Part 8 16.

..

..

..

and so on...
