<nothing in the body of the message>

In every newsreader I have ever seen, there's this large white space below the Subject line, and that's where your question should go... some newsreaders do truncate Subject lines that are "too long" so some may not even know what you are asking. <SIGH>

The only time I have had a similar problem was back in Access 2.0. I was trying to prototype a documentation system, which was to have reports that "re-created Government documents", so I imbedded a scanned copy of the document and then tried to add the text boxes to fill it in.

I had put the text boxes on before imbedding the image, so there was nothing to do but to put up with it.

But, I digress. First, let me say there is no registry entry "Force Access Reporting to run slowly in design view", so it is not a "general problem". Second, let me say that it is not possible for us to even make a wild guess about a problem unless we have some details of what data you have, how its laid out, what RecordSource query you're using, what you are displaying in which controls, etc. Third, if you'll provide that detail, I'd wager someone here will have a suggestion..
