There's no method that you can call to change the fields available in the data section of the chart?

"Duane Hookom" wrote:

I would create a normalized union query of the statistics that would place each stat value for each employee in a separate record. Then use a multi-select list box to select which statistics to include in the graph. Use a crosstab query as the Row Source of the chart. This should provide appropriate labels for the lines in the chart.

Here would be the values in the result set as an example

Week	Stat A	Stat B	Stat C
1	5	5	4
2	5	6	4
3	6	6	5

and so on...

All of that is in the person history table. The chart is only showing one person at a time, so ignore the existence of the person table...

So the two questions are that

1) i have checkboxes for a user to be able to toggle on and off stat A/B/C in the display and i don't know how to change what's being charted (there's actually 12 statistics, so it gets busy)

2) why is the legend showing "Sum of Stat A", "Sum of Stat B", etc instead of just "Stat A", "Stat B", etc. The data set includes only one row per

Re: Charting Question

week
for the person being displayed at that time.....

Thanks,
-B

Can you share the structure of the statistics table? I'm not sure if statistics are multiple columns or or a single field an multiple records.

I have a graph that i'm trying to display showing the history of a few fields.

There are 2 tables: Person and PersonHistory... For each person there is 1..many records in person history...

So the chart would show the trend of these fields in PersonHistory over time (week_ID is one of the records in personhistory...)

I am putting the chart on form that will enable the person to select a person from a dropdown containing all of the rows in the person table...

Also on this form is a check box for each statistic that would let the user determine what to show on the graph (it defaults to having all show up)...

1) How would i change the lines on the chart that were visible when

Re: Charting Question

someone
changes the checkbox?

2) The legend is showing "sum of <stat 1>"
"sum of <stat2>" etc instead
of
having the label just be "stat1", "stat2" etc...
I put the fields in
there
by
dragging and dropping from the field list
into the main box... Is there
a
way
to edit the legend values (i thoguht there was
in excel, but don't see
how
to
get there).

Thanks so much, this is my first foray into
the land of charts.
