In Access 2002 or 2003, that should work in Preview without needing to go to design view.

It won't work if you have opened in acViewNormal, i.e. printing without preview.

I was able to successfully change the Orientation and Page size in the open event of a report, however, it does not reflect in the report display unless I go into design mode and click OK. Is there a command that can be issued after the commands listed below, which will make these changes take effect without having to go into design mode and click OK ?

```
'Me.Printer.Orientation = acPRORPortrait  
'Me.Printer.PaperSize = acPRPSLetter
```
