Once I try putting the brackets around them and go to view the report it comes up with a box saying to enter parameter value for LABOUR R.

"Duane Hookom" wrote:

Either remove the spaces from your object names (my preference) or place brackets around them.

```
=[LABOUR R].Report![LABOUR SUBTOTAL] + [PARTS R].Report![PARTS SUBTOTAL]
```

So I put that control source in and once I press tab to get to the next field it gives an error: The expression you entered contains invalid syntax. You may have entered an operand without an operator. This is what I typed in:

```
=[LABOUR R].Report!LABOUR SUBTOTAL + [PARTS R].Report!PARTS SUBTOTAL
```

So my subreport names are LABOUR R & PARTS R the subtotal fields are called LABOUR SUBTOTAL & PARTS SUBTOTAL

Re: Adding two subtotals from two subreports in a main report

If both subreports

- are in the same report section and
- will always contain records and
- they have a text box named "txtRptTotal" containing the subtotals

You can create a text box in the main report with a control source like:

=[SWO R].Report!txtRptTotal + [LABOUR R].Report!txtRptTotal

If you don't find success, come back with some real values for us.

I have a report called SWO R that has two subreports in it called LABOUR

R

and PARTS R. Both of these subreports have subtotals in them created

using

a

text box and I would like to add the two subtotals together in the main report but I can't seem to get it to work.

Does anyone have any ideas

of

how

I can do this?
