Hello,

I have a Access report. In the detail area I have my sub report. When I view the report only the first page contains information in the sub report. The following pages the sub report is not there. Again I do have the sub reports in the detail section. There are many records that match. 90% of the report has matching records in the sub report. I do not understand why only the first page is bringing up records. Any ideas? Thank you so much for the help!

M
