hii,

for example i have a report (in microsoft access) which displays the sales of a small-scale industry from jan10th -06 to dec16 -06 and i want the user to reuse the same report for displaying the sales from/to particular date like may06 to aug06, coz if the user wants to take a printout of the report and if he doesnt want all the sales from jan to dec ,he should be able to select the data that is needed. is there anybody who can help with this problem.

.
