Thank you Michael!

No, I did not.

Here is my delimma. I had to load hotifix KB960715 (bloating issues) which brings Access to 12.0.6334.5000. The hotfix you are suggesting is dated prior to 960715. I read both hotfixes and there is nothing there to suggest that I can't load them out of sequence, but I am uncomfortable doing this. Is it ok to load older hotfixes on top of newer ones?

Paul

I have a simple report that I would like my user to be able to assign a printer to. I followed the example in <http://msdn.microsoft.com/en-us/library/bb258178.aspx> and downloaded the DB.

The task seemed straightforward, but could not get my report to remember its newly assigned printer. After several days of trial and error, I finally noticed that the example DB does not have any code associated with some of its reports (HasModule=No). My report does so I set that property to No for testing and it works??? I then returned to the sample demo and sure enough it doesn't work either if any report has any code linked to it. Can anyone please explain, I need code behind my report?
Thanks!

Have you applied this hotfix to correct printer settings not being

Re: Printer Object won't persist

saved?

<http://support.microsoft.com/kb/950488>

This hotfix allows changes to printer settings (including printer name) to be saved both in the Page Setup dialog and in VBA code.
