Mavis,

In the field i out [USDConversion]=[ClaimedAmount]*[ROE] but there is error.

If there is an error... tell us what the error is... in as much detail as possible.

If your referring to the calculated field in the query, it should be...
USDConversion : [ClaimedAmount]*[ROE]
Notice the ":" that separates the name of the calculated field from the calculation.

Hi,

In the field i out [USDConversion]=[ClaimedAmount]*[ROE] but there is error.
For your infor, USDConversion is not store in the table.

Thanks!

Mavis,
There is only so much we can do via email. I'll lay out the basics again, and hope that that will help.

Re: Amount claimed Sub total

I would suggest a Beginner's Access class if one is available.
Or... perhaps an Access How To reference book to supplement
Access Help... if you don't have one already.

First, let's handle the query behind the report.
Using the Query design grid... bring the table/s you want to base the
report on into the query, and drag the fields you want on the report onto
the design grid. (including ClaimedAmount and ExchangeRate)
In a blank column of the grid, create a calculated field...
On the "Field:" line put
USDAmount : [ClaimedAmount]*[ExchangeRate]
This creates a "bound" field named [USDAmount]... which calculates
the
value, and that field can be placed on the report, just like any
normal table field.

With this field on the report, use the report design's
Grouping and Sorting dialog box to create a Group Footer on your
Category field.
In the Category Group Footer, a text control with a ControlSource
of...
= Sum(USDAmount)
will give the total of the USDAmounts for each different Category.

In the Report Footer, a text control with a Control Source of...
=Sum(USDAmount)
will yield the sum total of USDAmount... for all Categories

Hi,

Thanks so much for your prompt reply. I am very new to
access. Not very
sure
how to do the stp you mention below. Can you advice me?

Thanks!

Re: Amount claimed Sub total

Mavis,
Several ways to do that...
One method is to create a calculated field in
the query behind the
report.
USDAmount : [ClaimedAmount] *
[ExchangeRate]
Place the bound USDAmount on the report.

After every category of each
item i will need....

Using your Grouping and Sorting to create a
"Category" Group
Footer.
In that Category Group footer, a calculated
field named
CategoryTotal
with a
ControlSource of...
= Sum(USDAmount)
will yield the totals for each category.
In the ReportFooter...
= Sum(USDAmount)
will yield the USDAmount total over all
Categories.

Hi All,

I have this report which is
setup using a query.
The following will be my
fields of the report.

Exchangerate, Currency,
ClaimedAmount,
USDAmount.

Re: Amount claimed Sub total

The value of USDAmount is generated using a formula, " $=[\text{ClaimedAmount}][\text{ExchangeRate}]$ ".

After every category of each item i will need to have a sub USD total.

There will be a Overall USD total in the report.

Can anyone advice how can i get the sub USD total and Overall USD total?

Note: Each line can be in different currency.
