open any access database I am receiving the same Username/password pop-up.  
How do I remove this and set the user groups for a specific database rather  
than any access database that I open?

Whether you are prompted for userName and password is dictated by the  
workgroup file being used and that is NOT controlled by which file you are  
opening since the workgroup is loaded before the application file.

When you created a new workgroup file for your secure app Access  
(unhelpfully) made that workgroup your default. You just need to use the  
Workgroup Administrator to change your default workgroup back to System.mdw.  
Then you can use a custom shortcut for your secured file that specifies a  
different mdw file as a command line parameter. The syntax is roughly...

"path to MSAccess.exe" "path to mdb" /wrgrp "path to mdw"
