HAPPY NEW YEAR!!!

I have 2 secured mdbs, both sharing the same workgroup. I have linked tables between both mdbs. How do I ensure that when vba procs run in one of the secured mdbs, it will be able to write data to linked tables from the other secured mdb? I would have thought that, once logged into one of the mdbs via a shortcut to the appropriate workgroup, a permitted user would have permissions to write to the linked table, so long as both mdbs are secured via the same workgroup.

Thanks,

Bill
