Hi Thanks for the security Information ,

Now i in another fix with the second part,

I have created the USER ID and password for the table, when a person logs into the table it should display his/her name in the FORM, and when a data is saved the displayed name should also get saved,

Hi.

1. To give admin & user access  
-- User = read / write (should not be able to delete or update information)

[quoted text clipped – 5 lines]

i  
dont want that to happen!!

If a user has write permissions on the file, then he can update and delete data in the file, unless Access User-Level Security is implemented. If you have a method that prevents these updates and deletes without User-Level Security being implemented, then please share it with the rest of us, because you're the first one who's ever done it, and we'd like to pat you on the back.

Or perhaps you would like to reconsider User-Level Security. One may download the Security FAQ, which provides instructions on securing your database and includes a number of handy code procedures, from the following Web page:

<http://support.microsoft.com/?id=207793>

Re: How to Give Admin and user access to a data file

HTH.  
Gunny

See <http://www.QBuilt.com> for all your database needs.

Hi All,

[quoted text clipped – 17 lines]

stored  
in the table!
